Porter ElectricPower

PORTER

ElectricPower

100% ECOLOGICAL URBAN COMMERCIAL TRANSPORT

Since its debut in 1995, the Porter ElectricPower has been the benchmark for zero emissions commercial vehicles. Ideal for all transport, service and express courier applications in the urban environment, the Porter ElectricPower has now been revised with significant technical improvements. The new electric motor with separate energising circuit, together with the optimised control driver and signal transmission wiring and software, ensures increased smoothness and comfort: precise power control during starting and pickup, less heat generation, more efficient management of the available energy, and more indication of vehicle speed and other parameters necessary for vehicle management and maintenance.

STRENGTHS

- Fully electric zero emissions vehicle perfect for the historic city centre
- Revised powertrain and control electronics for increased smoothness and comfort
- Available in all versions and bodystyles

Porter ElectricPower

ZERO EMISSIONS

Versatile and compact, the Porter ElectricPower is the ideal work partner for getting about the city centre with ease. Its advanced technology eliminates emissions entirely and cuts running costs considerably. And with its totally silent operation, the vehicle also contributes to reduce noise emissions.

ZERO COMPLICATIONS

Drives just like a normal commercial vehicle; with an accelerator pedal, a brake pedal and a manual forward/reverse selector instead of a gearbox and clutch. Two operating modes - standard and economy - cater for all necessities. The technological heart of the vehicle consists of a powertrain with a direct current electric motor with separate energising circuit and an easily accessible battery pack.

Versions

DECK

- Load capacity up to 520 Kg
- "All flat" deck available in two lengths, with dropsides and tailboard in steel or alloy

TIPPER DECK

- Load capacity: 450 Kg
- "All flat" deck with hydraulic tipper system and 45° tip angle

CHASSIS-CAB

- The ideal base for outfitting with a huge range of special equipment variants

VAN

- Load capacity: 470 Kg
- Load volume of over 3 m³ with sliding doors on both sides as standard

WINDOW VAN

- Load capacity: 430 Kg
- Four-seater goods-cum-passenger vehicle

Technical Specifications

TECHNICAL SPECIFICATIONS		PORTER ElectricPower				
Engine	Separate excitation direct current brush engine					
Fuel system	Electric					
Nominal power	10.5 kW 96 Volt					
Nominal torque	55 Nm at 1,800 rpm					
Peak torque	215 Nm					
Operating current	124 A					
Insulation Class	(F) Tmax=100°C ±15°C					
Environmental Protection Rating	IP20					
Max speed	55 Km/h					
Max range	up to 110 Km					
TRACTION BATTERIES						
Type	Lead Gel					
Battery charger input voltage	220 V					
Nominal energy	17 kWh					
Battery charger type	On-board					
Battery charger power	2 kW					
Time for complete charge	8 hours					
Max recharge cycles (estimate)	800					
GEARBOX						
Type	Continuously variable transmission					
No. of ratios	Forward and reverse					
OTHER CHARACTERISTICS						
Maximum gradient fully loaded	18%					
Cooling system	Air					
DIMENSIONS	Chassis-cab	Deck Long	Deck Tipper deck	Van	Window van	
Length (mm)	3,555	3,775	3,565	3,400	3,400
