

Particularly heavy duty usage, carrying loads that are always near the maximum capacity of the vehicle, with frequent descents and with repeated, prolonged or hard braking, will put any vehicle under extreme stress, resulting in the **accelerated wear** of its components.

Piaggio now offers the opportunity to **protect your vehicle** against this stress by fitting a supplementary **chassis reinforcement**, which is installed quickly and without any modifications to the chassis itself.

The **K kit increases the structural stiffness** of your Porter's chassis, letting it tackle the heaviest duty work without feeling the strain.

Also available for the Porter Euro 5.
